Description	
Hi,	
with eap-radius when can pull some usefull datafor for a eap identity. In this we also have Framed-Route that would be good to use for setting up the leftsubnet so we easely have a sentral base for the policy that also could be used in conjunction with rightgroups eg.	
Typical notation for framed route, this can appear several times. Framed-Route "10.0.2.0 255.255.255.0 10.0.10.1 100"	
For Strongswan it would be sufficient with "10.0.2.0 255.255.255.0" and set to ignore all other numbers to keep compability.

Would be awesome to have this since it would allow to set on-the-fly fine grained SA's for users logging in.

#2 - 19.01.2016 11:16 - Oleksandr Yermolenko

very, very useful feature as for me !!!

Dear Developers,
Do you have any plans to implement this request?

Thanks a lot for clarification.

Oleksandr
