

strongSwan - Feature #1207

Add more than 2 hosts support to HA plugin and make it configurable

13.11.2015 08:18 - Alexander Sukhomlinov

Status: New	Start date: 13.11.2015
Priority: Normal	Due date:
Assignee:	Estimated time: 0.00 hour
Category: libcharon	
Target version:	
Resolution:	
Description	
<p>Since [[https://wiki.strongswan.org/projects/strongswan/wiki/HighAvailability]] works great with 2 hosts and traffic balanced partially with option autobalance.</p> <p>If it possible to realise support more than 2 hosts, autobalance ipsec traffic bettween all active nodes and configure those hosts by editing option of:</p> <pre>ha { local = local_address remote = remote_address_1, remote_address_2, remote_address_3, etc... segment_count = 5 secret = asd fifo_interface = yes monitor = yes resync = yes autobalance = 10 }</pre>	
<p>it would be great.</p>
