<b>Affected version:</b> 5.3.5	<b>Resolution:</b> No feedback
<b>Description</b> Hello, everybody! It is widely known problem already. Windows7 (and 8 and 10) can't setup route to ::/0 via connected ikev2 vpn: <a href="https://wiki.strongswan.org/issues/817">https://wiki.strongswan.org/issues/817</a> Unfortunately, this <a href="https://www.mail-archive.com/users%40lists.strongswan.org/msg09241.html">https://www.mail-archive.com/users%40lists.strongswan.org/msg09241.html</a> <a href="http://users.strongswan.narkive.com/UPQXV3EV/ipv6-link-local-router-solicitations-over-vpn-for-windows-7">http://users.strongswan.narkive.com/UPQXV3EV/ipv6-link-local-router-solicitations-over-vpn-for-windows-7</a> method with manually applied link_local_ts patch still doesn't help: Problem still remains at strongswan-5.4.0dr4 version. Please, someone who can, make real TS patching for next strongswan-5.4 version! Thank you!  PS. latest MacOS works well (successfully setups default ipv6 route) with strongswan-5.1.
