Target version: 5.5.2	
Resolution: Fixed	

Description

Hi,
In general connection parameters of ipsec.conf: conn <name>, there is DSCP field definition.

```
ikedscp = 000000 | <DSCP field>
```

Differentiated Services Field Codepoint to set on outgoing IKE packets sent from this connection. The value is a six digit binary encoded string defining the Codepoint to set, as defined in RFC 2474.

But DSCP related field can not be found in swanctl.conf, why? or will DSCP be supported in future? Any comments?

Br,
Ferry

Yes, that option is currently missing. I've added it to the *vici-updates* branch.
