

strongSwan - Issue #2698

DSCP and kernel-libipsec

04.07.2018 14:20 - Peter Whisker

Status:	Feedback	Resolution:
Priority:	Low	
Assignee:		
Category:	kernel-interface	
Affected version:	5.6.3	
Description		
Hi		
TOS/DSCP markings are copied from the inner packet to the UDP/4500 ESP packet in "standard" Strongswan, however when using kernel-libipsec the outer packet does not receive the TOS/DSCP of the inner packet. Is there any recognised way of getting the inner packet TOS/DSCP set on the outer packet when using kernel-libipsec?		
Thanks Peter

Is there any recognised way of getting the inner packet TOS/DSCP set on the outer packet when using kernel-libipsec?

No, currently not.
