

strongSwan - Issue #2701

Low bandwidth when Iperfing data through IPSEC tunnel

09.07.2018 10:37 - Edvinas Kaikaris

Status: New	
Priority: Normal

Category:	
Affected version: 5.6.3	
Resolution:	
Description	
We have two server connected next to each other. When we're iperfing each other through 'simple' physical interaces - we're getting ~5GB/S of bandwidth. But when im sending traffic through tunneled (strongswan) GRE interface. Im getting only ~400mbits of traffic and some ksoftirq process is utilized. Is there are some remedies ? Server is quite powerfull: Intel Xeon E5-2620 0 @ 2.00GHz
