

strongSwan - Issue #2896

IPv6 Default route under Windows 10

24.01.2019 19:23 - James Dogopoulos

Status: Closed	
Priority: Normal	
Assignee:	
Category: interoperability	
Affected version: 5.7.2	Resolution: No change required
Description Installed the latest Win 10 pro release, after the usual client side fixes to make everything work, an IPv6 default route is no longer being installed on the Win 10 client when it seemed to do so just fine in an older version. Unless there is a config option I am missing on the client. Seems similar to this issue [https://wiki.strongswan.org/issues/1284]

Never mind, I found this wiki entry [<https://wiki.strongswan.org/projects/strongswan/wiki/WindowsClients>] .. obviously I wish there was a better way but I will work with it.
