

strongSwan - Bug #304

Incompatible file names

04.03.2013 16:37 - Stefan Tomas

Status:	Closed	Start date:	04.03.2013
Priority:	Normal	Due date:	
Assignee:	Andreas Steffen	Estimated time:	0.00 hour
Category:			
Target version:	5.0.3		
Affected version:	5.0.2	Resolution:	Fixed
Description			
Certain recently added files have names with dot character at the end, which is not compatible with Windows file systems. It would be nice not to use such names, if possible. Files in question are: testing/hosts/winnnetou/etc/bind/dsset- testing/hosts/winnnetou/etc/bind/dsset-org. testing/hosts/winnnetou/etc/bind/dsset-strongswan.org.			

History

#1 - 05.03.2013 09:10 - Andreas Steffen

I removed the point-terminated Delegation Signer files, since the content has been integrated into the zone files.
