Where have you looked?

#2 - 15.11.2019 07:16 - Noyal PA

Can that be configured in Strongswan?

#3 - 15.11.2019 10:34 - Tobias Brunner

Can that be configured in Strongswan?

You mentioned the source code. I asked where you looked (in the Android source code it's pretty obvious where this stuff is set up). Now you talk about configuration. That's different again. While the local identity can be configured, the traffic selectors can't (the app allows changing the local routing, though, but always sends 0.0.0.0/0 as traffic selectors).
