Description	
<p>Hello, please could you consider for strongSwan/Android App an option to configure eap_id for EAP-TLS profiles?</p> <p>Use-case for de-coupling IKE identity and EAP identity is pretty similar to previous enhancement request: https://wiki.strongswan.org/issues/3134</p> <p>Essentially IKE identity is used to steer users into appropriate backend settings while EAP identity is the real username.</p> <p>Thank you in advance Karel Hendrych</p>
