Description	
Hello,	
<p>I wanted to submit an idea for a feature, with that you can make existing configurations read-only, so that users (employees) can only connect to offered VPN configs but not modify or delete them. Please correct me if that is already possible, but I have not yet found a way to do that with the current Android app. A simple check box in the settings that can be checked and then asks for a PIN code/password, that must be entered when you want to get out of the read-only mode would be more than sufficient.</p>	
BTW thank you for your great work and the time that you invest to keep all your applications up to date!
