

strongSwan - Issue #568

CRL

12.04.2014 21:23 - Jim Smith

Status: Closed	
Priority: Normal	
Assignee: Andreas Steffen	
Category:	
Affected version: 5.1.2	Resolution: No feedback
Description Hello, we are currently having problems dynamically updating the CRL list. Once we revoke a cert, is there a way for that change to be immediate? Presently we need to restart IPSEC for the changes to occur. Thanks for any assistance

Hi Jim,

the strongSwan IKE daemon will not try to fetch a fresh CRL before the nextUpdate time in the CRL has passed. If you want to revoke IPsec endpoints more quickly then you must either dramatically reduce the lifetime of a CRL e.g. down to an hour or use the Online Certificate Status Protocol (OCSP) which will give you realtime information on the certificate status.
