

strongSwan - Feature #7

Relational database configurations/credentials

02.07.2007 16:27 - Martin Willi

Status: Closed	Start date:
Priority: High	Due date:
Assignee: Martin Willi	Estimated time: 0.00 hour
Category: charon	
Target version: 4.2.0	
Resolution:	
Description Implement a configuration backend/credential set which reads from a relational database on demand. This is thought to work in conjunction with the XML configuration interface (#4) and would allow a external application to write its configuration to the database.	

History

#1 - 15.02.2008 09:41 - Martin Willi

While the implementation is available as a pluggable module, it is out of date and needs an update and improvements. We should create a generic database API to allow the implementation of other database backends (mysql).

#2 - 10.03.2008 18:49 - Martin Willi

Rename the plugin to something database-independant. Implement credentials lookup.

#3 - 02.04.2008 16:30 - Martin Willi

- Status changed from New to Closed

- Affected version set to fixed
