auto=add
```

Still trying to get logs. I have a few servers which currently have entries like the one mentioned, but the relevant log has been rotated and deleted a while ago. (In any case, those entries don't disappear, even after the relevant IP and/or user haven't been seen by that server for more than a week.)

Niels,

The problem probably comes from an IKE_SA that got stuck in the REKEYING state. DPD doesn't trigger at this state to avoid any interferences in the rekeying procedure. However, if the peer starts rekeying, but does not complete it with a DELETE message, the IKE_SA gets stuck.

You may try the patch at the [ike-rekeying-dead-state](#) branch. It triggers a timeout for IKE_SAs in that state.

Regards
Martin

- *Tracker changed from Issue to Bug*
- *Status changed from Feedback to Closed*
- *Assignee changed from Tobias Brunner to Martin Willi*
- *Target version set to 5.3.0*
- *Resolution set to Fixed*

The issue has been addressed with the referenced commit, merged to master. Not a perfect fix, but should work around this issue.

I'm closing the issue, feel free to reopen if the issue persists.

Regards
Martin
